

For immediate release 02 December 2008

Truepress Jet520 @ Hunkeler Innovation Days (16-19 Feb 2009)

At the Hunkeler Innovation Days 2009, Screen will be showing its market leading high-speed inkjet machine the [Truepress Jet520](#). During the exhibition Screen will demonstrate its ability to print high quality colour on a wide range of applications including direct mail and books.

For the last sixty years, Screen's technologies have been used by many of the world's leading printing companies to produce stunning results in offset, gravure and flexo printing. The same core technologies are now being introduced to digital printing and the same quality criteria being applied.

The result is a machine that offers one of the highest speeds available at 128 metres per minute and the most impressive print quality of any of the current generation of inkjet devices.

Within the [Truepress Jet520](#) family, Screen is able to offer tremendous flexibility with options that are suitable for very different throughput requirements. A customer can start with an entry level machine that consists of a single engine that is capable of printing simplex or half-width duplex at 32 metres per minute and upgrade all the way through to a full duplex (two engines) running at 128 metres per minute.

We look forward to welcoming you in Lucerne.
