Screen and Pitney Bowes' Group 1 Software Deliver System Connectivity Between Truepress Jet520 and DOC1 Document Composition Software

Dainippon Screen Mfg, Co., Ltd. and Pitney Bowes' Group 1 Software today announced the delivery of one-to-one communications and system connectivity between Screen's Truepress Jet520 printing system and Group 1 Software's DOC1 document composition software.

In the latest printing industry, there are more and more demands for personalized documents or printed materials with high quality and additional values. In response to these market conditions, Screen has developed and been providing Truepress Jet520, a full color inkjet variable printing system, that offers fast processing speeds of 64m per minute in maximum – 840 A4 pages per minute by two-up duplex –, with the perfect balance of exceptional performance, good print quality and competitive operating costs.

The aim of this connectivity announcement is to enhance seamless workflow and open system environment of variable printing solution by connectivity between Truepress Jet520 and Group 1's "DOC1", the industry leading document creation software.

DOC1 Ver.5.4, which will be released in June, 2007, will support Screen's recommended page description language for Truepress Jet520, TOP (Truepress Optimized PostScript), enabling effective integration between DOC1 and Truepress Jet520, and maximizes Truepress Jet520's high speed processing.

Truepress Jet520 will be demonstrated at On Demand Exposition in Boston, MA, in the United States from April 16th, 2007.

Dainippon Screen

Dainippon Screen Mfg. Co., Ltd. (Kyoto, Japan) is a leading company in system components for the prepress and printing industries. Its extensive range of equipment includes scanners, workflow systems, RIPs, proofing systems, plate-setters and digital printing presses. The company is also a well-known manufacturer of equipment for the semiconductor and flat panel display manufacturing industries.
