SCREEN TAKES AWARD-WINNING TRUEPRESS JET2500UV ON EUROPEAN TOUR

Screen is taking the opportunity to show its award-winning Truepress Jet2500UV large format printer at a string of open houses and exhibitions around Europe during February and March. Visitors will be able to see for themselves the high quality output that this machine is capable of producing and the wide range of applications to which it is suited.

The Truepress Jet2500UV was recently awarded 'New Product of the Year' by the Digital Printing & Imaging Association and this powerful wide format UV inkjet printer sets new performance standards for sign and display production. It supports a maximum output resolution of 1,500 dpi which combined with the drop-on-demand, eight-level grayscale printhead and Screen's exclusive screening technology gives smooth gradations for photo-quality colour printing.

With its state of the art digital imaging technology coupled with both roll fed and flatbed capabilities, the Truepress Jet2500UV can add considerable value to the forward-thinking printer looking for the quality, productivity and flexibility offered by high-quality inkjet output.

Its true hybrid ability means that it can be used for numerous applications on a variety of rigid and flexible substrates, such as: posters, banners, signs, displays, backlit signs, fine art, billboards, decals and vehicle wraps. It can easily produce high-quality printing on vinyls, paper, acrylic, glass, tiles, doors, blinds, plastics, plywood, ceramic tiles and corrugated plastic materials up to a thickness of 50 mm and 2,500 mm wide.

The Truepress Jet2500UV can be seen at the following open houses and exhibitions:

- | | |
|---------------------------------|--|
