Screen's Riteapprove SE v4.02 provides greater integration and automation for Trueflow

The latest version of the online job submission, remote proofing and approval solution for Trueflow SE gives users a raft of new features and improvements

Screen Europe has announced version 4.02 of Riteapprove SE, its online job submission, remote proofing and approval solution for the Trueflow SE workflow. The new version gives even greater integration with Trueflow than ever before.

Its improved job automation eliminates the need for manual intervention at key check points, allowing smoother transition of files through the workflow. Approval takes place at page level to make it easier for the user and there is a visual indication in Trueflow when a page is approved. The thumbnails of the pages now display the proofing status.

A comment feature has been added with a range of drawing tools that can be used to mark corrections. To complete the proofing process, an email notification alerts the user if the preflight check fails. There is a host of other improvements in v4.02, from extending the area image view to multi-language support.

Riteapprove SE is ideal for Trueflow users who want to add online job submission, proofing and approval to their web-to-print operations. It automates the overall production cycle, shortens the time from prepress to press and improves customer satisfaction. The system enables collaborative working, last-minute correcting and final approval of production files before they are imaged on to the plate or output to a digital press.

Unlike the conventional FTP upload method, the Riteapprove SE transfer client automatically monitors and corrects transmission errors, ensuring proper file delivery. The customer can drop files into the file transfer GUI, connect to the Riteapprove SE server, select the job, fill out a custom online form and upload. The process is very simple.

A prepress operator can easily send a request for approval with just a few clicks of the mouse from a web browser. All participants in the approval process can view the output online, add

comments and approve or reject the document. This automated process frees up the production operator to work on other jobs while waiting for final approval. Riteapprove SE automatically sends approval status to Trueflow SE.

End
