

High-speed creation of optimized PDF data for label printing

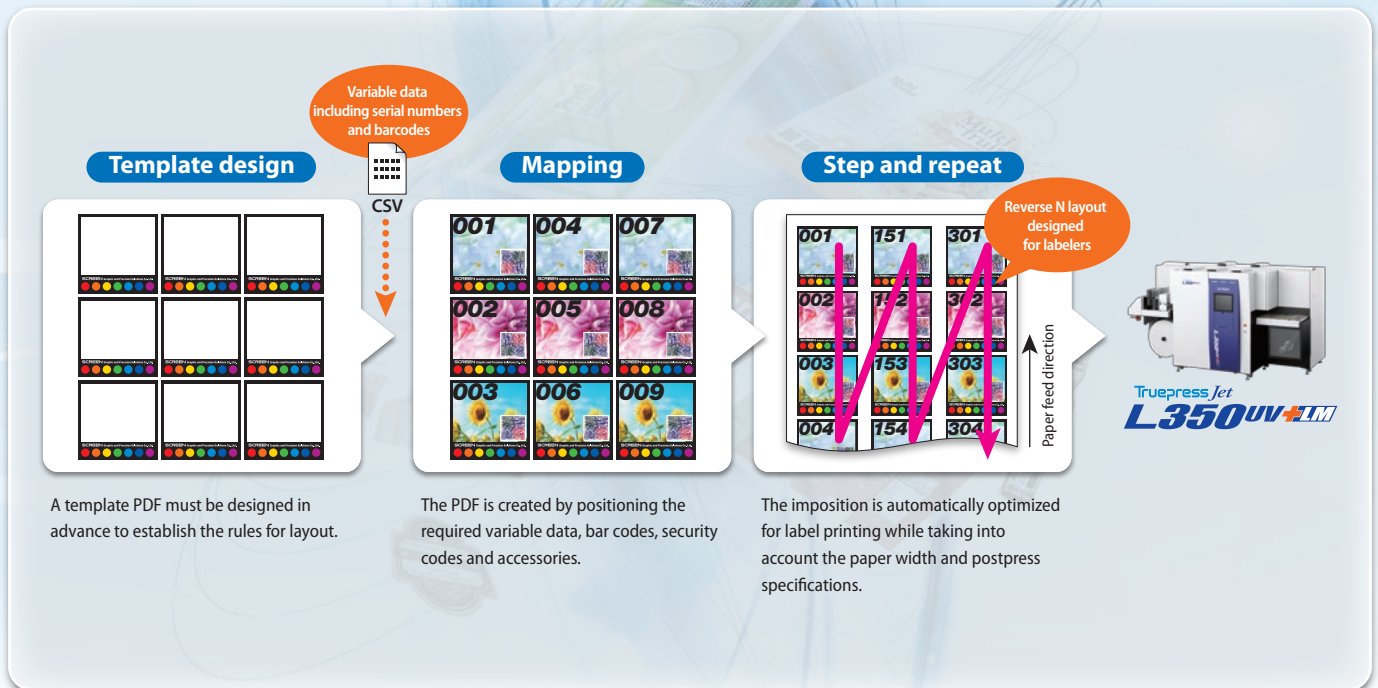

Variable Data Creation Software for Labels

The data processing capacity of front end software is a key factor in gaining maximum productivity from any label printing system.

At the same time, the appropriate layout design is required for the printing and postpress systems regarding the placement of barcodes, control numbers and accessories.

SCREEN's PDFFormstudio enables the rapid creation of PDF print data that is optimized for the label production process.

With this innovative software, previously labor intensive editing work can now be automated, delivering major time savings.

Two types of application are available to extend capabilities for different workflow and productivity requirements.

PDFFormstudio ES (Editing Station)

This compact authoring tool brings together the key functions required for designing PDF submission workflows for label printing.

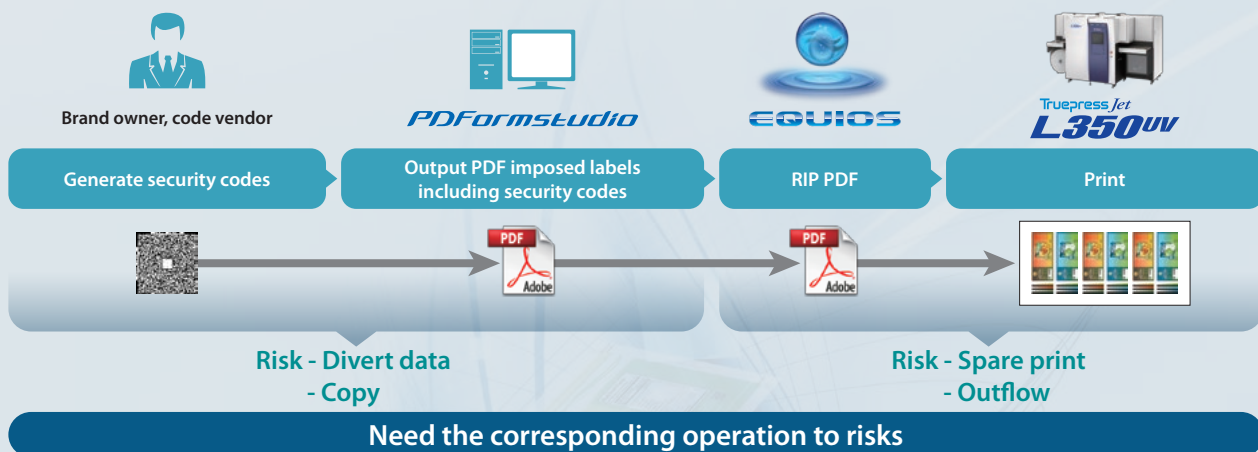

PDFFormstudio GS (Generating Output Station)

This extender station automates processing using the rules created by the editing station. It is optimized for the creation of high-volume variable data.

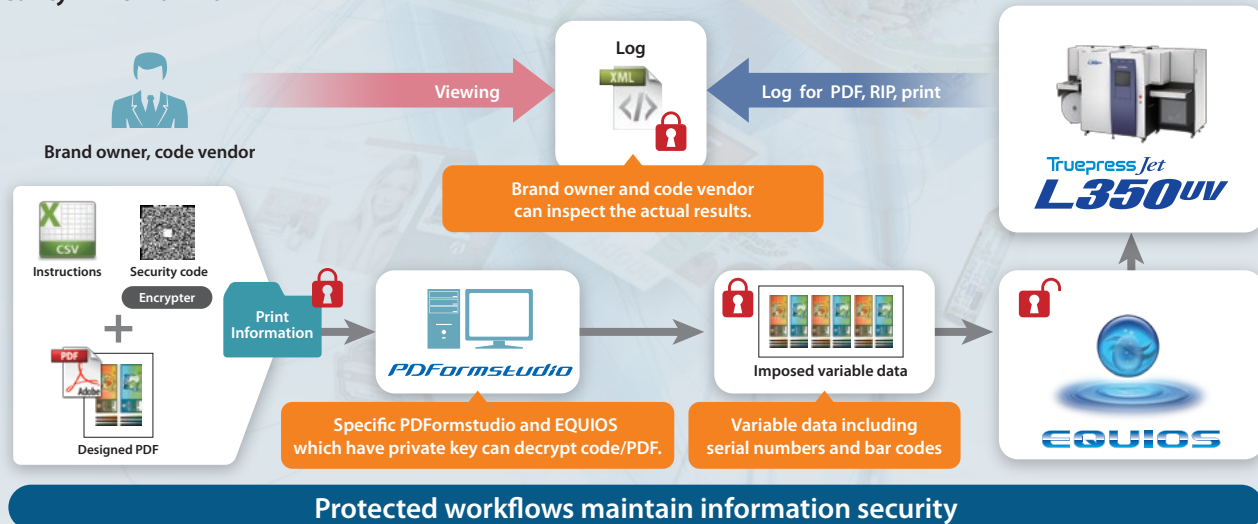

Security Print Workflow

Maintains data security during label printing, fully protecting brand owners
